

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

An INDEX for this *First* Volume of the Second Century of these Tracts, for the Year 1674.

The Letter *n.* signifies the *Number* of the Tracts; the Letter *p.* the Page.

A.

AIR; touching the Compression of it. Observations of M. Leewenhoeck, n. 102. p. 21. The Air of Iceland, n. 111. *Anatomy*; a man that had the order of his bowels inverted, n. 107. p. 146.

Astronomy: A Catalogue of *Kepler's* MSS, some of worth unprinted in the hands of M. *Hewelius*, with some account of his Life, and Letters between *Kepler* and other famous Astronomers, n. 102. p. 27. *Hewelius* about Telescopical Sights and his Organography, *ibid.* and Dr. *Wallis* concerning the same, n. 111. M. *Hugenius* and Signior *Cassini's* Judgment upon M. *Hook's* attempt to prove the Motion of the Earth, n. 105. p. 89. Mr. *Flemist* concerning an Instrument to shew the Moon's true place within a minute or two. His design to correct the hitherto assign'd motions of the Sun. The necessity of making new solar numbers, with an Expedient for making trial, Whether the Refractions in Signior *Cassini's* Tables be just, n. 110. A new Astronomico-Chronological Work, undertaken by D. *Wapmont*, n. 104. p. 74. A strange and unusual Mock-Sun and other Phenomenon by *Hewelius*, Feb. 5. 74. and an extrem Frost following, n. 107. p. 26. Concerning a Comet seen in *Brasil*, Anno 1668. by *Valent Ephraim*, JHS. n. 105. p. 91. Mock-Suns frequently appearing in *Iceland*, n. 111. Observations of the Eclipse of the Moon of Jan. 1. 1675. made in *London* and *Paris*, n. 111.

B.

THE Bleeding to death of a little Child at several parts of the body in a strange manner, n. 109. p. 193.

Book.

A. Of *Air*, against the gravitation and Spring of it, *Diffinitives nuge*, n. 104. See M. *Bayle's* Animadversions on *Hobbes's* infia; and his former Discourses in the Pneumatical Continuation, Hydrostatics, and against *Fr. Linus* and *Hobbes*: Compare these.

Animadversions upon an imperfect Version of some Volumes of these Transactions into bad *Latine*, n. 106.

Avons, shewing the benefits of making large Rivers navigable from the Sea to Inland Cities, n. 110.

B. *Alonso Barba* of the Art of Metals, rendred *English* out of *Spanisk* by the late Earl of *Sandwich*, F. R. S. n. 108. and n. 109.

Th. Bartholini de *Anatome practica ex morbofis cadaveribus adornanda Conflum*, n. 107.

Erasmi Bartholini *Selecta Geometrica*, n. 106. *idem* de *Natura mirabilibus*, n. 107.

Dav. van dez Beck *Experimenta & Observat. circa Rerum Naturalium principia*, n. 103.

Pauli Bocconis *Icones & Descriptiones rariorum plantarum, Siciliae, Melitae, Galliae, Italiae*, n. 104.

Mr. *Boyle* about the Excellency of the Mechanical Hypothesis, n. 103. His Suspensions about some Hidden qualities of the Air, of Celestial Magnets, &c. His Animadversions on M. *Hobbes's* Problem, de *Vacuo*: Of the Cause of Attraction by Suction, n. 110. The same of the Possibility of the Resurrection, n. 111.

C. Guil. Cole de *Secretione Animalis*, 106.

D. Isbrandus Dimmerbroeck de *Anatome Corporis humani*, n. 105.

Monfieur *Drelincourt's* Censure on a new pretended way of a Lithotomist in *France*, n. 107.

E. *Eloquence*: Of the true power and ornament of Language in Oratory and Poetic, n. 110.

Mr. *John Evelyn*, of Navigation and Commerce, their Original and Progress, and with a special relation to *England*, &c. n. 104.

F. Mr. *Sam. Fortrey*, *England's* Interest and Improvement by the Increase of the store and trade of the Kingdom, n. 101.

G. *Grammar*: An Essay to facilitate the teaching and learning of *Latine*, and thence of any other Language, by M. *Lewis*, n. 110.

Anton. Le Grand *Institutio Philosophica platonism aucta*, n. 108.

H. Mr. *Hook's* Attempt to prove the Motion of the Earth, n. 101. His Animadversions on the first part of M. *Hewelius* his *Machina Caelit*, together with an Explication of some New and Curious Mathematical Instruments, devised by the same M. *Hook*, n. 109.

K. Mr. *Kersey's* Elements of Algebra finish'd, n. 108.

L. Roger L'Estrange of the Fishery, n. 101.

Logica, five *Arscogitandi*, & *Gallio Latine reddita*, n. 105.

M. Joh. Mayow de *Sale Nitro & Spiritu Nitro aereo*; de *Respiratione in genere*; & de *Respiratione Fetus in Utero & in Ovo*; de *Motu Musculari*, de *Spiritu animalibus*, & de *Rachitide*, n. 105.

Claud. Fr. Milliet de *Chales Cursus five Mundus Mathematicus*, universam Mathesein tribus Tomis completens, n. 110.

Ephemeridum Medico-physicarum Germaniae Annustertius, n. 101.

Wm. Job. Muller's Description of the Kingdom of *Perru*, and the Gold Coast of *Guinea* in *Africa*, n. 108.

Raymond Mindervenus his Body of Military Medicines experimented, *English'd*, n. 101.

P. Sir William Petty's application of the Duplicit Proportion to divers very important Uses and Performances; with a new Hypothesis of elastic or springy motions, n. 109.

R. Mr. *Reynel*, of the true *English* Interest by Trade, Agriculture, &c. n. 102.

S. Mr. *Sierburn's* Translation of *Mamilus* on the Sphere, into an *English* Poem, with Annotations, and a large Appendix, shewing what Astronomers have done in Astronomy, as far as is extant, *ab origine* to this time, n. 110.

Joh. Schefferi *Lapponia*, n. 102.

John Smith's *England's* Improvements revived, n. 103.

Mr. *Sturgeson's* Mathematical Compendium, collected out of Sir *Jonas Moore's* Papers, n. 104. His Royal Almanack for A. 1675. with the Appulies of the Moon, and other Planets, to the Fixed Stars, from Mr. *Flemist*, for the Meridian of *London*, n. 108.

Gymnasty:

I N D E X.

C.

C *Hymslry*: Dr. Daniel Cox his way of extracting *Volatil* Salt out of Vegetables, n. 101. p. 4. This intimated before, n. 100. p. 7002. The same shews that Vitriol is produced by Sulphur, &c. Likewise Allom; and that Vitriol, Sulphur and Allom do agree in the same principle: The nature of Salt in Brimstone: That Common Salt, together with the Aerial Salt, is the foundation of all Saline substances in the Universe, n. 104. p. 65. His Experiments tending to find out the Nature of Vitriol, and to give further light in the Inquiry after the Principles and Properties of other Minerals, n. 103. p. 41. He denies the Pre-existence of Alcalifate or Fixed Salts in any subject before it is exposed to the Action of the Fire: He confirms his former assertion, deliver'd, n. 101. viz. That Alcalifate or Fixed Salts, extracted out of the ashes of Vegetables, do not differ from each other: The same affirm'd of Volatile Salts and Vinous Spirits, n. 107. p. 150. More touching the Identity of Volatil Salts, and Vinous Spirits, n. 108. p. 64. His two surprizing Experiments made upon Plants, that yielded Salts perfectly representing the shape of those Vegetables, whence they had been obtain'd, n. 108. p. 175.

A Comet. See *suprà* *Astronomy*.

D.

Diamonds lately brought into France out of the East-Indies, of several curious Colours, fine violet, and pale-rose colour, yet as hard as any Diamonds, n. 102.

A New Discovery concerning *Nova Zembla*, with Discourses of a passage towards the Northern Pole, n. 101. p. 3. Instructions for the Discovery of a North-east passage, and the Land of *Jesso* near Japan; and Relations about Gold and Silver Countries, and a North-west passage, n. 109. p. 197.

Drapery, n. 103. p. 48.

E.

Of the Electrical power of Stones in relation to a Vegetable Resin, by Mr. Lister, n. 110.

H.

HORSES, Choice Horses for breed, n. 103. p. 48.

I.

Iceland describ'd by a learn'd Inhabitant of it, n. 111. Inquiries Geographical and Oeconomical, n. 111. and n. 103. p. 48.

England's Improvements, solicited in this and the former Volumes of these Traacts: Instances, n. 101. p. 19.

L.

THE Lake in *Cyriola* more accurately described by Dr. Brown in his Answer to Inquiries, n. 109. p. 194. 'Tis in summer a rich Lawn of pasture and meadow, and a chase well stor'd with deer, and other good game for hunt-

ing: From September (all winter) 'tis a huge Lake call'd a Sea, well stored with good fish: The water in September returning in a sudden and furious spout from underground, and bringing along with it the abundance of fishes; which fishes are imprison'd underground all the summer, and under Ice all winter. Compare this with n. 54.

To prepare and tan Leather, a New Invention, and the Engin described, n. 105. p. 93.

Light: A Letter of Fr. Linus, animadverting on Mr. Newton's Theory of Light, with an answer thereunto, n. 110. A strange Light in the Sea of Iceland for several days together, n. 111.

M.

Mathematical Globes, a new size, newly much rectified, n. 102.

Meteors, see Mock-Suns, in *Astronomy*.

Medecines: An account of the two Helmontian Laudanums, by Mr. Boyle, n. 107. p. 147.

Medical matters: A Dropfie mistaken to be Gravida-tion, n. 106. p. 131.

Microscopical Observations of M. Leewenhoeck about Blood, Milk, Hair, Nails, Bones, the Brain, Spittle, Cuticula, Sweat, Fat, Tears; on the Eye of a Cow, and the sixth pair of Nerves, on Salt, English Potters Earth, Flemish Earth, &c. n. 102. 106.

Minerals: Of the Efflorescence of certain Mineral glebes; an odd figured Sparr; certain true *Lapides juncti* for kind to be found in England; of a *Glossopetra triseptis non ferrata*; of the vitrifying of Antimony by Cawk, and the use of that substance for Speculums; by M. Lister n. 110.

Musbroms, the flowers and seeds of them, by Mr. Lister n. 110.

P.

PEARLS; of their Original, by Mr. Sandius, n. 101. p. 11.

S.

SALT; Inquiries concerning it for domestique uses; and to preserve Sheep n. 103. p. 48.

Snails, Both Land and fresh water Snails enumerated in a Table and Scheme, by Mr. Lister, n. 105. p. 96.

Stones, of a perfect gold colour, found in Animals, by Dr. Johnson, n. 101. p. 9.

W.

WATER: Sir Sam. Moreland's undertaking to raise Water above the usual expectation, from the several forces and weights given, &c. n. 102. p. 25.

Z.

NOVA Zembla, otherwise figured than hitherto believed. See *Discoveries* *suprà*.
